

Power Media Ltd

Photographic Retouching Service Online

We need a bilingual service site which will feature previews of services, and allows customer registration as user. Users can upload their pictures after registration and order a set of services that should be performed on their pictures. Delivery of the improved picture is also online within the member area of the customer – also the delivery area. Communication between service provider and customer is within the service site, but e-mail notification are to be sent to both service provider and customer whenever a new communication or service request is initiated. We think this service can be realized within the scope of a Drupal or Mambo/Joomla setup with a customized e-commerce module. Specific (not relative) CSS/html design that we will deliver as PSD file will be an important part of the project.

Roles:

- **Members**
Members profiles. Each user will have its own profile, messenger where he stores his messages and his picture gallery. The customer can upload or delete his pictures. If booking a service the customer can order a number of operations related to single selected picture within his gallery. Prepayment is required.
- **Admin:**
Can see and edit all pictures and member areas. Can upload finished pictures in the delivery area of the member area.

User administration

- **Account & Profile Settings**
Personal information such as name, email or details about themselves users can edit at anytime using the easy to use account/profile system. They can upload or delete pictures any time (limit number and weight?). Messages and Mails are only to be sent between the administrator or service provider and the member.

Administration

- **Browse Members**
Will allow the staff to browse all users and perform important actions like deleting a profile pic or banning a member.
- **Site Content**
All the main content that can be changed is listed in this section and covers content like the "terms & conditions" or the "about us" page.
- **Blog or news function** where the admin can submit content and articles relevant to the services – also in order to provide SEO relevant texts.
- **Memberships**
Allows staff to edit any memberships or even add new memberships to their sites.

- **Image**
Modify any configuration settings that have to do with images.
- **API gateways**
Allows to integrate with paypal / money bookers / other payment provider
- **Page Session**
Monitor all the pages registered members or non registered users visit to keep track of which section is used the most.

Technical requirements

Platform

- **Linux**
- **PHP**
- **MySQL**

Coding

- **Design standards**
We will provide a design that is to be realized as CSS / HTML design. We will not endorse relative design but will define details precisely.
- **Framework:** We think that this project is possible within a standard CMS setup such as Drupal or Mambo / Joomla.

Data structures of members

- Unique ID
- user name = e-mail address
- First name
- Second Name
- Street, number
- zip code
- City
- State / Country
- pictures in the member-gallery
- messages sent and received

Data structure of shopping cart

- Unique ID of customer
- Unique ID of order
- ID of picture involved in Order
- services to be delivered
- Price per service
- Total
- VAT
- Discounts (like discount codes to be entered with the order)
