

I am looking for a talented individual / firm who is familiar with working with wordpress blog software. It is important that you are familiar with optimizing word press blogs for adsense etc. I have been trying to work with wordpress it seems to be the best option however If you have a better solution I would be open to it as well. the closest example of what I am looking for is <http://japwatches.wordpress.com> however they do not have any advertisements / adsense etc. Also I would like the same categories as this site plus some additional ones. I do like the 3 column design of this site.

From this example I would like to:

- Add my logo, jpg will be provided
- Change to a more white lighter overall theme
- Remove BlogStats and Recent Post From Left Nav
- Remove Recent Comments from right Nav
- I would like post in this sites categories to aggregate to my categories and post on m blog. (not just links to his posts)
- Again all of the post and site should be optimized for google adsense and auctionads.com
- I would also like to be able to post a topic and insert ebay rss feeds directly into the post
  - Something like
    - Post Topic: Cheap Ladies Rolex
    - Post Content:
      - All these watches are below Book Value
      - [RSS Feed] Would display Gallery Images Title And Price (I have seen some WP plug ins that claim to do this but have not been able to get them to work
- The left hand Nav would be
  - Find Luxury Watch
    - Rolex
    - Omega
    - I would need to add to these pages
  - Reviews / Information
    - Categories
      - aggregated from [japwatches.wordpress.com](http://japwatches.wordpress.com)

I think this is enough info to base a project price on.
