

Project Clarification for project „Shopping Mall“

First of all I want you to fully understand the scope of the project. Since I made some bad experience in the past -- some freelancer did not really understand what I want -- I ask you to read the project description again and try figure out what it really means.

If you have any questions please ask me immediately.

This project is for building an entire shopping mall site (not just a shop) using Joomla 1.5 (or any other good CMS).

Please go to www.netmall.de to see what I mean by "shopping mall". This example site uses a PHP script from www.affilinator.de/news-1.html which just fetches/imports via XML and caches the product data from affiliate systems like **Affilinet** (www.affili.net), Amazon, eBay, CJ, Zanox etc.

This project includes:

- Finding and installing an appropriate Joomla extension and/or
- Coding of a new extension.
- Selecting and installing a nice template
- Script installation on a linux root server

At least all the functions of the script at www.affilinator.de must be accomplished.

Please read this as examples/references:

http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,3220/Itemid,35/

http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,2369/Itemid,35/

<http://joomlashopbuilder.com/>

http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,1023/Itemid,35/limit,15/limitstart,15/

No, it is not to implement the above mentioned script into Joomla. This project means that ALL the functions of the script at www.affilinator.de must be accomplished. It means not a script to implement in Joomla but to implement all the FUNCTIONALITY of the script "Affilinator" into Joomla (or another good CMS) by using/programming the appropriate extensions.

Let me use another words: The project is to CLONE the Affilinator script by using Joomla and some Joomla extensions plus some additional coding.

Deutsch:

Es geht um die Programmierung einer virtuellen „shopping mall“ (Einkaufszentrum). Eine „shopping mall“ ist kein „Shop“, sondern nur eine Sammlung unterschiedlicher Shop-Angebote mit Suchfunktion etc. auf einer Site. Ein gutes Beispiel dafür ist die Website www.netmall.de. Diese Beispielsite benutzt ein PHP-Script „Affilinator“ von www.affilinator.de/news-1.html. Details zur Funktion siehe dort.

Auf der Basis von Joomla 1.5 oder eines anderen guten CMS (z.B. Drupal) sollen alle Funktionen des Scriptes „Affilinator“ nachgebildet werden. Es geht nicht darum, den Affilinator-Script in Joomla zu integrieren.

Möglicherweise eignen sich Joomla + VirtueMart + eigene Code-Ergänzungen ganz gut.

Das Projekt beinhaltet also:

- Finden und installieren der dafür geeigneten Joomla-Extensions und/oder
 - Programmierung eigener Extension oder Code-Änderungen
 - Suche und Installation eines guten Templates
 - Installation des Ganzen auf einem Root-Server
-
