

New website for sport boats

We're looking for a web designer to make a new website. We sale sports boats, most of them are RIB-boats. Also we sale used boats, and maybe we widening our product range in the future.

We like to have a management system that we can add a new product range, and fill it.

In the menu structure is a screen with a slide show option. The slides are random pictures out the all database. But we need the option to add own pictures to the slide show, for example for a action model and period. So this pictures, need to be adjustable in the priority we like.

The information screen, will be filled when we add a new page, and give it a new name. We like to choose where we have to add the new page (witch label)

In the header from the page we like to add/upload by our self the "Head picture" and logo...

For the articles we like to add them by our self. We also like to add new properties pro group. The group properties will be saved!

Properties example ; Length, wide, persons, thickness material, etc.

We like to have a designer how daily stay in contact and flexible is to deliver together the best result.
