Development Notes & Document Terms

(Color Code) Websites that have the same color code are considered to have the same basic programming infrastructure. This also means that once the basic programming code infrastructure the code can then be cloned and modified to fit the websites special features.

(Modification / Clone / Combination) Terms: **Modification** – Developing the code and changing the code to fit the key features to make the site unique. / **Combination** – The code of the site will take on features of two or more websites. / **Clone** – The code will be the identical match of the example site.

(Design or Programming) – Design is the front end visual presentation of the website. Programming – is the basic infrastructure and workability of the website

(Deadline Time Frame) – Is the amount of time give to develop the complete code of the sites. Sites with the same color code are to be developed at the same time and finished at the same time simultaneously. With the exception of the “Resource Portals” which the development time will be duplicated.

(Budget Price) – The price that is budgeted for that portal. The price only reflects programming because design will not be needed in this project.

(Terms & Conditions) – All of these are considered one (1) project. All of these sites are in this one project package.
