

Small Construction/Builder WebSite Design Improvement

Specification :

1. A Flash Intro Page (with dynamic photos and Text)
2. There are Six Main Navigation Pages, all are Static pages no database:
 - a. Home
 - b. Projects
 - c. Services
 - d. Links
 - e. Gallery
 - f. Contact

The website and all these Pages are already available with the Template (Change could be made to adjust the implementation) They just need to be organised and changed to be user interactive and eye catching. Usefull information and contents must also be enhanced for web site to look professional.

Home :

The home page should contain Introduction of company and News and/or new Projects anoucement section. So the new projects or announcements can be displayed. A simple Flash banner is placed on Top.

Projects

(construction Projects)

Most of the work must be done on this section to make it flexible and eyecatching.

Projects page should contain interactive sections for all construction-projects with current project on the top. (Currentyl we only have 1 project so...)

User must be able select and see the details of each project. The project detail section should contain a Flash movie (ideally dynamically generated with the content and images) that introduce the Project and navigation links to details of Project. Details must be sectioned in a way that lateron new details can be inserted.

Services

List of services and contact information like „ask for service“ which should take details from user like Name, Email, Telephone, and the Information about Service required. Information should be emailed via CGI script.

Links

Links Page contains the links and details of ongoing activities in the construction fields.

Gallery

Gallery Page should contain a interactive Gallery of Picture from a Folder, new Pictures will be Added to Folder.

Contact

Contact Page will have interactive Contact Information and a query form.

Simple and Easy : User your Ideas I Just need to make the Website more interactive and eyecatching. Image and Content will be provided but should be enhanced. Browser compatibilty must be checked CSS,HTML DHTML,XHTML
