

Title: Simple but effective CMS system to manage rich text + small image management.

Aim:

For a small company website I want to have a userfriendly CMS (I prefer not to use Joomla etc. ) that can manage 3 different content pages, and a system to upload some images per content page (see figure: "image (option)")

Requirements:

- The CMS should be easy to manage and written in the english language.
- It should be possible to include images whitin the text per content page, and rich text should be possible to (bold, underlined, italic, color, size, font)
- The URL's of the pages must be Google-friendly e.g. <http://www.bu.nl/contact-us/index.html>
- The code of the page must be very clean (CSS + HTML used properly)
- There also needs to be an tool created to upload "style" images per content page (see figure: "image (option)")
- Everything needs to be written in .php (version 5 preferred)

Schematical view of webpage:

- button 1 (simple button to new page)
- button 2 (simple button to new page)
- button 3 (simple button to new page)
- logo button (same function as button 1)
- text (dynamical text + image option)
- image (option per page, must be dynamical to)
