

WEB page Specs for jpgus. KEY WORD... **Kayak**

- 1) Home page with 3 links.
  - 2) Contact page, based on the home page, with email link and simple contact form.
  - 3) 7 same format gallery pages changing only: Title, Photos shown, Links
  - 4) Link to a pop-up PDF of highlighted photo on 3 of the gallery pages.
- Menalto G2 is the preferred gallery with slight modifications  
 Something I can edit myself (not necessarily web based) would be best platform.  
 Joomla-G2 would be great if it is sensible. The aesthetics come first.

Home and Contact like this:

Gallery pages to look like

The logic would be as show here.

Home page like this. With 3 links. Story, Portfolio, Contact.  
 Whole site requires Refining and Harmonization of Fonts, Colors, layout and Resolution. Gallery's should be dynamic and hopefully based on Menalto G2. Home page and contacts can any fast-loading language they need to be but all photos and text are just place holders and should be easily editable by ME. The editability does not have to be web based, just fairly easy. Joomla-G2 seems like it would be great if it makes sense to use it.
